

## Additional Relationship DNA Testing Services Offered:

- Maternity
- Siblingship
- Grandparentage
- Avuncular
- Prenatal Paternity

### Determining Paternity

A paternity test is extremely accurate and confidential. The results are determined through DNA testing of the child, mother and alleged father. A paternity test can be performed without testing the mother; however it does reduce the statistical value of the test. Every effort should be made to test the mother when she is available.

### Legal and Private Testing

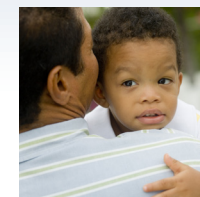

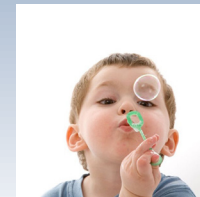

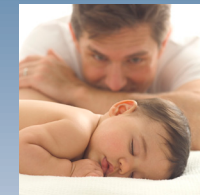

Both legal (court-admissible) and private (peace of mind) testing options are available. Our fully accredited laboratory is unique in that it follows the same rigorous high quality standards when processing both legal and private tests.

## Benefits of Paternity Testing:

- Child Support
- Child Custody
- Inheritance
- Immigration
- Peace of Mind
- Social Security Benefits
- Military Survivor Benefits

## Quality Services Offered By:

## Did You Know?

- One out of three men tested is not the father.
- DNA collections are fast and painless, no blood testing is required.
- Hair, a toothbrush, or fingernail clippings can be used for a paternity test.

**Children deserve the love and support of both parents. Establishing paternity provides the first step toward securing a child's future.**

## Why Choose Us?

### Fast and Accurate Results

Our turnaround time for test results is the fastest in the industry with RUSH result times available.

### Accredited Laboratory

All testing is performed by an AABB, FQS-I, NYDOH and ISO 17025 accredited laboratory.

### Affordable Pricing

Our high quality testing is competitively priced, making accurate DNA results affordable for everyone.

### Excellent Customer Service

We have professionally trained staff members available to assist you with your DNA testing needs.

### Confidentiality

We understand the sensitive nature associated with paternity testing. Therefore, your personal information and testing results are always kept completely confidential.

## Common Questions:

### Q: How accurate is the test?

A: DNA testing is extremely accurate. The laboratory meets or exceeds all standards established by the AABB.

### Q: What if the alleged father is not available for testing?

A: When it is not possible to test an alleged father, paternity can be established indirectly (i.e. grandparents, siblings, aunts, uncles, etc).

### Q: What if the individuals being tested reside in different cities or states?

A: We are capable of scheduling separate appointments in thousands of locations across the United States.

### Q: How is a DNA collection performed?

A: A DNA collection is quick and painless. A sterile swab is rubbed on the inside of your mouth for 20-30 seconds to collect cheek cells.
